IDENTIFIERS *Illinois; *Library Statistics

ABSTRACT

Using data provided by the annual reports of Illinois public libraries and by the Illinois state library, this publication is a companion to the November 1982 issue of "Illinois Libraries," which enumerated the 16 data elements upon which the analyses are based. Three additional types of information are provided for each of six population size groups, each of 18 regional library systems, and for the state as a whole: (1) the mean, range, and quartiles of each of the 16 data elements; (2) 17 ratios and percentages for each library based on these data elements; and (3) the means, range, and quartiles of each of these 17 ratios. The 16 data elements reported both for individual libraries and in the summaries by population, library system, and the state as a whole include population served, nonresident family fee, hours of operation, total circulation, total staff, book volumes added and held, number of periodical titles currently received, assessed valuation, tax rate, local government and other receipts, wages and salaries, expenditures for library materials and operations, and total operating and capital expenditures. Twenty-two graphs and charts are included. (LMM)

Analyses of All Libraries in Illinois 81

PREFACE

For several years, the Illinois State Library has contracted with the Library Research Center to produce analyses of statistics of public libraries in Illinois. This fifth edition of the *Analyses* presents summary statistics of data for 1981-82. This publication is a companion to the November 1982 issue of *Illinois Libraries*, which enumerated most of the raw data upon which the analyses presented here are based. The data are summarized for each of six population groups and for each library system; as of October 1982, all public libraries in Illinois were members of library systems. In addition, sixteen ratios based on the data have been calculated, and are reported for each library individually as well as for each population group and each library system.

At the recommendation of the ILA/PLS Committee on Public Library Statistics, salaries of head librarians are listed in the *Analyses* for the first time this year.

We welcome your comments and suggestions on any aspect of this publication and ask that you notify us of any errors in the statistical tables. If you have recommendations for improvements in the content or presentation of the *Analyses* please let us know. Special tabulations may be requested through the Illinois State Library.

The compilation and analysis of data are the product of effort by many individuals. We wish to thank Daisy Auyeung and Carrie Klabunde, who were responsible for the tedious work of entering and verifying data; Lisa Bachrach and Sharon Baker, who edited the annual reports and prepared them for entry; Ron Crocker, whose computer programming skills made the tables presented here possible; Susan Bonzi, Assistant Director of the Library Research Center, who supervised the entire operation; and Herbert Goldhor, Director of the Library Research Center, who was always available for advice.

INTRODUCTION

Analyses of the 1981-82 Illinois Public Library Statistics interprets data obtained from the annual reports of public libraries in Illinois and additional data concerning those libraries which were provided by the Illinois State Library. Since public libraries in Illinois do not all base their operations on the same fiscal year, the annual report form requested that each library submit data for its fiscal year ending between July 1, 1981 and June 30, 1982.

The data have been analyzed in several different ways. In addition to statistics for individual libraries, summary statistics are presented for each of the eighteen Illinois library systems, for each of six population groups, and for the state as a whole. The six population groups are: Under 5,000; 5,000 to 10,000; 10,000 to 25,000; 25,000 to 50,000; 50,000 to 75,000; and 75,000 to 250,000. Data for Chicago are presented separately. Within each group, the average (arithmetic mean) and three percentiles were calculated for each data element. The average is the sum for all libraries in a group divided by the number of libraries in the group. The three percentile ranks indicate the values below which 75% of the group, 50% of the group, and 25% of the group are found. The highest and lowest values for each group are also given.

The following statistics are provided in summary form for each of the six population groups and each of the eighteen library systems:

POP--Population served.

NON RES FEE--Nonresident family fee for use of the library, if reported. Otherwise, the nonresident fee is the individual fee. If individual fee is not reported, the larger of student fee or other fee is used.

HRS PER WK--Number of hours the central library was open during a typical week in October 1981.

TOTAL TRANS--Total circulation of library materials.

TOT FTE--Total paid professional and nonprofessional staff, including pages and shelvers but excluding building maintenance staff, expressed in full-time equivalence (full-time equivalence equals 40 hours worked per week).

VOLS ADDED--Total number of book volumes added.

VOLS HELD--Total number of book volumes held.

PERS REC--Number of periodical titles currently received.

ASSD VAL IN 000'S--Assessed valuation, in thousands of dollars.

TAX RATE--Tax rate per hundred dollars of assessed valuation; a tax rate of 0.12 is equal to 12 cents per $100 of assessed valuation.

LOC GOV REC--Total receipts from local government.

TOT REC--Total receipts from all sources.

WAGES AND SALS--Expenditures for wages and salaries, including fringe benefits, for all staff except building maintenance staff.

LIB MAT EXP--Expenditures for all library materials.

OTHER OPER EXP--All other expenditures for current operations, including salaries of building maintenance staff.

TOT EXP--Total operating and capital expenditures.

The following data are provided for each library and, in summary form, for each of the six population groups and each of the eighteen library systems:

TRAN PER FTE--Number of circulation transactions per paid full-time equivalent staff, excluding building maintenance staff, based on a 40 hour work week.

TRAN PER CAP--Number of circulation transactions per capita for the population served.

TRAN PER ITEM HELD--Number of circulation transactions per item in the collection, including books, motion picture films and audio recordings.

TRAN PER HOUR OPEN--Number of circulation transactions per hour the library was open, based on the total number of circulation transactions for the year and the number of hours open during a typical week in October 1981.

% ADULT TRAN--Circulation of adult materials as a percentage of total circulation.

FTE PER K POP--Number of full-time equivalent staff, excluding building maintenance staff, per 1,000 population.

MLS % OF TOTAL STAFF--Number of paid staff holding a library degree at the master's level as a percentage of total staff (not including building maintenance staff).

VOLS ADDED PER CAP--Number of book volumes added per capita.

VOLS HELD PER CAP--Number of book volumes held per capita.

% VOLS ADDED--Number of book volumes added as a percentage of number of book volumes held.

ASSD VAL PER CAP--Assessed valuation per capita, in dollars.

OPER EXP PER CAP--Total operating expenditures per capita, in dollars.

% WAGES--Operating expenditures for wages, salaries and fringe benefits for paid staff, not including building maintenance staff, as a percentage of total operating expenditures.

% LIB MAT--Expenditures for library materials as a percentage of total operating expenditures.

MAT EXP PER CAP--Expenditures per capita for library materials, in dollars.

% OTHER--Operating expenditures, other than expenditures for wages and library materials, as a percentage of total operating expenditures. This includes wages and fringe benefits for building maintenance staff, rent, long-term debt retirement, and other miscellaneous expenses.

SAL HEAD LIBR--Annual salary of the head librarian. When an hourly wage was reported rather than an annual salary, the annual salary was calculated by multiplying the hourly wage times the number of hours worked per week times 52.

Ratios are shown for each library within each population group and system. Next, the average, high, low and three percentiles for each population group and system are shown for each of the ratios derived from the data. The averages for ratios are based on data for all libraries taken separately, not on the total of one element divided by the total of another.

In order to make the tables as meaningful as possible, missing data have been excluded from calculations. If a library did not report separate totals for adult and juvenile circulation, for instance, no attempt is made to include data for that library in the calculations for the column labelled "% ADULT TRAN," and data for that library are not included in the averages for its population group or system. When the answer to a questions is given as zero, that answer is included in the calculation of the statistics only if zero is a meaningful answer; otherwise, it is treated as missing data.

SUGGESTED USE OF THE TABLES

Comparisons Among Groups of Libraries

Study of the averages gives a good general picture of each population group and each library system. The average of each data element not only describes the group as a whole but can provide interesting comparisons with other groups. Comparisons among different population groups can suggest general trends. The following table illustrates some comparisons among the population groups:

Selected Averages of Ratios and Percentages
Among the Six Population Groups

POPULATION GROUP	TRAN PER FTE	TRAN PER CAP	TRAN PER ITEM HELD	TRAN PER HOUR OPEN	% ADULT TRAN	VOLS HELD PER CAP	SAL HEAD LIBR
Under 5,000*	16,879	7.5	1.6	13	63	5.5	$ 5,405
5,000 - 10,000	16,315	6.9	2.2	21	64	3.3	11,996
10,000 - 25,000	14,838	6.8	2.5	36	64	2.9	18,598
25,000 - 50,000	14,709	7.7	2.8	80	62	2.7	24,676
50,000 - 75,000	13,304	8.4	2.6	138	64	3.1	31,943
75,000 -250,000	12,994	6.7	2.6	194	66	2.5	33,043
State	16,044	7.3	2.0	35	64	4.3	11,819

*Note: as used here and throughout this publication, "Under 5,000" means 4,999 and fewer, "5,000 - 10,000" means 5,000 through 9,999, etc.

As can be seen from the above table, both transactions per full-time equivalent staff and transactions per capita tend to decrease with increased library size, but transactions per item held and transactions per hour open increase with increased library size. The percentage of total circulation accounted for by circulation of adult materials varies very little from one population group to another, and no population group differs from the figure for the state as a whole by more than two percentage points. The average salary of head librarians increases as size of library increases, but the state-wide average is fairly low.

These comparisons among the various population groups are just somme of the possible relationships which can be examined, not only among the population groups, but also among the library systems. Although these comparisons are informative, some consideration should be given to the number of libraries in each group. The statistics for the Under 5,000 population group, for instance, are based on reports from 308 libraries, while the 75,000 to 250,000 group consists of only seven libraries. Every effort has been made to include in the calculations only data which are in fact meaningful. If only one or two libraries are substantially different from the rest of the libraries in a group, however, the average for that group will be affected such that it may not provide a representative picture of the group as a whole. This can be especially true if the total group is small. For this reason it is generally useful to examine the 50th percentile (median) as well as the average for any data item.

Graphs

A number of graphic comparisons of population groups and systems have been provided. The graphs for population groups follow the population group tables; the graphs for systems follow the tables for systems. Some of the graphs provide comparisons not only among groups, but for different years as well.

Comparison Between One Library and Groups of Libraries

Comparison of an individual library with others in the same system or same population group can be used to assess that library's standing in relationship to other libraries serving communities of similar size or in the same geographical area. For an individual figure, such as operating expenditures per capita, it can be seen whether a particular library is above or below the average for its system or population group. The percentiles for a data item should be examined, however, since a library could be below the average for a particular group but above half (the 50th percentile) of the libraries in the group. In the 5,000 to 10,000 population group, for instance, a library whose operating expenses per capita equalled $8.75 would be below the population group average of $9.75, but well above the 50th percentile for the group, which is $7.18.

Comparisons among individual libraries, such as neighboring libraries or libraries serving similarly-sized communities, can be made from the tables just as they can be made using the data provided in the November 1982 issue of *Illinois Libraries*.
